

PERFORMANCE CAPABILITIES OF THE BOVANS BROWN EGG LAYER

Growing Period

Livability	96-98%							
	17 Weeks		18 Weeks		19 Weeks		20 Weeks	
	US (lb)	Metric (kg)	US (lb)	Metric (kg)	US (lb)	Metric (kg)	US (lb)	Metric (kg)
Feed Consumption (Cumulative)	12.50	5.68	13.69	6.22	14.94	6.79	16.27	7.39
Body Weight	3.09	1.400	3.31	1.500	3.55	1.600	3.75	1.700

Laying Period

Age at 50% Production	138 - 140					
Percent Peak Production	95 – 96%					
	60 Weeks		72 Weeks		80 Weeks	
Hen Housed Eggs	252		317		357	
Livability %	95.7		94.5		93.7	
	US (lb)	Metric (kg)	US (lb)	Metric (kg)	US (lb)	Metric (kg)
Body Weight	4.44	2.014	4.47	2.028	4.49	2.037
Average Egg Weight at: (lbs/360eggs & gms/egg)	51.7	65.1	51.7	65.1	51.8	65.3
HH Egg Mass		15.5		19.7		22.4
Feed/Dozen eggs	3.38		3.45		3.51	
Kg feed/Kg egg		2.08		2.09		2.12

The BOVANS BROWN is a brown feathered, brown egg layer which has the ability to meet the expectations of a variety of egg producers with different objectives. She is the bird of choice for today's egg farmers who expects high egg numbers and a forgiving bird, all essential ingredients to keep their business profitable. She not only performs well for the egg producer with traditional production facilities, being very docile is making her the perfect bird for alternative production methods as well.

The performance goals and specification set forth in no way constitutes a warranty or guarantee expressed or implied of performance, health, merchantability or tolerance to disease.
